

Drug Information Sheet("Kusuri-no-Shiori")

Self-injection
Revised: 09/2022

The information on this sheet is based on approvals granted by the Japanese regulatory authority. Approval details may vary by country. Medicines have adverse reactions (risks) as well as efficacies (benefits). It is important to minimize adverse reactions and maximize efficacy. To obtain a better therapeutic response, patients should understand their medication and cooperate with the treatment.

Imprint or print on wrapping:

Effects of this medicine

This medicine promotes cholesterol uptake in liver and reduces blood cholesterol level. It is usually used to treat familial hypercholesterolemia or hypercholesterolemia.

The following patients may need to be careful when using this medicine. Be sure to tell your doctor and pharmacist.

- If you have previously experienced any allergic reactions (itch, rash, etc.) to any medicines or foods. If you have liver disease.
- If you are pregnant or breastfeeding.
- If you are taking any other medicinal products. (Some medicines may interact to enhance or diminish medicinal effects. Beware of over-the-counter medicines and dietary supplements as well as other prescription medicines.)

Dosing schedule (How to take this medicine)

- Your dosing schedule prescribed by your doctor is ((to be written by a healthcare professional))
- For heterozygous familial hypercholesterolemia or hypercholesterolemia: In general, for adults, 140mg of evolocumab (as active ingredient) is administered subcutaneously once every 2 weeks or 420mg of evolocumab is administered subcutaneously once every 4 weeks.
For homozygous familial hypercholesterolemia: In general, for adults, 420mg of evolocumab (as active ingredient) is administered subcutaneously once every 4 weeks. In case of insufficient response, or is administered as adjunctive therapy for patients with LDL apheresis, 420mg of evolocumab may be administered subcutaneously once every 2 weeks. Strictly follow the instructions.
- The sites for injection are abdomen, thighs and upper arms. You cannot inject this medicine into the outside of upper arm by yourself.
- Tests are performed regularly, and if insufficient reaction to this medicine is confirmed as a result, use of this medicine may be discontinued.
- If you miss a dose, contact your doctor. You should never take two doses at one time.
- If you accidentally inject more than your prescribed dose, consult with your doctor or pharmacist.
- Do not stop injecting this medicine unless your doctor instructs you to do so.

Precautions while taking this medicine

- Strictly follow the instructions on dietary/exercise therapy or cessation of smoking if instructed to do so by your doctor.
